Head of Department

ABSTRACT

This internship report presents the development of two Virtual Reality applications, namely **VR Chase Cricket** and **VR Bicycle Simulation**, along with **NEXUS Campus**, developed using the Unity game engine and modern UI/UX design tools. The objective of these projects was to design immersive and interactive experiences that combine realistic animations, responsive environments, intuitive user interactions, and intelligent learning support systems.

VR Chase Cricket is a VR-based cricket game that focuses on dynamic fielding mechanics, smooth animation blending, and event-driven player actions to simulate a realistic cricket experience. The project emphasizes the use of Animator Controllers, Blend Trees, and trigger-based systems to synchronize gameplay logic with character animations.

VR Bicycle Simulation is an interactive VR application designed to replicate a real-world cycling environment within a virtual city setup. The project includes object interaction features such as grabbing and placing items, enabling a hands-on and immersive simulation.

NEXUS Campus is a conceptual educational application focused on designing a user-centric workflow and interface using **Figma**. The project demonstrates how AI-assisted learning features can be integrated into an educational platform, including image-based input for content understanding, automated summaries, interactive labeling for concept identification, and the **NEXI chatbot**, which acts as a virtual teacher to clarify user doubts.

Through these projects, practical exposure was gained in VR application development, Unity's XR Interaction Toolkit, animation and interaction systems, UI/UX design principles, and immersive application usability, highlighting the interdisciplinary application of Virtual Reality and intelligent interface design in gaming, simulation, and educational domains.

ACKNOWLEDGEMENT

Initially we thank the almighty for being with us through every walk of our life and showering his blessings through the endeavor to put forth this report. Our sincere thanks to our Chairman **Mr. S. Meganathan, B.E, F.I.E.,** our Vice Chairman **Mr. Abhay Shankar Meganathan, B.E., M.S.,** and our respected Chairperson **Dr. (Mrs.) Thangam Meganathan, Ph.D.,** for providing us with the requisite infrastructure and sincere endeavoring in educating us in their premier institution.

Our sincere thanks to **Dr. S. N. Murugesan, M.E., Ph.D.,** our beloved Principal for his kind support and facilities provided to complete our work in time. We express our sincere thanks to our Head of the Department and Associate Professor **Mr. S. Uma Maheshwara Rao, MA., MFA., Design,** Department of Computer Science and Design for his guidance and encouragement throughout the internship.

SNEHA S (221701055)

CHAPTER-1

INTRODUCTION

Virtual Reality (VR) is an immersive technology that allows users to experience and interact with computer generated three-dimensional environments in real time. With recent advancements in VR hardware and software tools, VR applications are widely used in areas such as gaming, simulation, training, and education. VR enhances user engagement by providing realistic interactions and a strong sense of presence compared to traditional applications.

This internship involved the development of two Virtual Reality projects **VR Chase Cricket** and **VR Bicycle Simulation and Nexus Campus** using the Unity game engine. The objective of these projects was to gain hands-on experience in VR application development, focusing on animation systems, interaction mechanics, and immersive environment design.

VR Chase Cricket is a VR based cricket game that focuses on dynamic fielding mechanics and smooth animation blending to simulate realistic player movements. Trigger-based animation systems were used to synchronize gameplay actions such as throwing and celebrations. VR Bicycle Simulation is an interactive VR application designed within a virtual city environment, emphasizing user-object interactions such as grabbing and placing items using Unity's XR Interaction Toolkit.

Overall, the internship provided practical exposure to Unity based VR development, animation blending techniques, and VR interaction design, strengthening foundational skills in immersive application development.

CHAPTER - 2

SYSTEM DESIGN

2.1 VR CHASE CRICKET – UNITY SCENE SETUP

The VR Chase Cricket environment was developed using the Unity game engine, where a virtual cricket ground and player setup were created to simulate realistic gameplay. The scene included player positioning, field layout, and gameplay elements required for VR-based cricket interaction. This setup formed the foundation for implementing dynamic fielding mechanics and animation-driven gameplay.

Following the environment setup, player models and gameplay components were configured

- Designing the cricket ground environment suitable for VR gameplay.
- Setting up player positions and movement zones.
- Configuring scene elements to support ball interaction and fielding logic.
- Ensuring VR compatibility and proper scaling for immersive gameplay.

Fig 2.1 Animator Controller and Blend Tree Configuration

2.2 GAMEPLAY AND ANIMATION SYSTEM

- Implementation of Animator Controllers for managing player animation states.
- Use of Blend Trees to achieve smooth animation transitions.
- Trigger-based animation logic synchronized with gameplay events.

Fig 2.2 Fielding and Throwing Animation Integration.

2.3 VR Interaction Framework

- Controller-based interaction handling for VR gameplay.
- Object grabbing and interaction support for VR Bicycle Simulation.
- Player movement and interaction feedback within the VR environment.

Fig 2.3 Unity Interface

2.4 Deployment

- Standalone VR build generation.
- Performance testing for stable frame rates.
- Interaction and animation validation before deployment.

CHAPTER – 3

PROJECT DESCRIPTION

3.1 VR CHASE CRICKET - GAMEPLAY AND ANIMATION DESIGN

VR Chase Cricket is a VR-based cricket game designed to deliver an immersive sports experience. The project focuses on dynamic fielding mechanics and animation synchronization to simulate realistic cricket actions.

Responsibilities included:

- Implementing dynamic fielding mechanics responsive to ball movement.
- Designing smooth animation transitions using Blend Trees.
- Triggering throwing and celebration animations based on gameplay events.

Fig 3.1 VR Player Model Used in Cricket & Bicycle Simulation

3.2 VR BICYCLE SIMULATION – ENVIRONMENT & INTERACTION DESIGN

The VR Bicycle Simulation project involved the creation of an interactive city environment designed to simulate real-world cycling scenarios. The focus was on environmental immersion and user-object interaction

- Developing a city-based VR environment in Unity.
- Implementing grab-and-place interaction mechanisms.
- Designing interactions that enhance realism and immersion.

A key contribution is the attention-aware behaviour system, which uses ray-based gaze detection. The character responds naturally if the user looks away, enhancing immersion and coaching authenticity.

3.3 NEXUS CAMPUS – UI AND DESIGN

The **NEXUS Campus UI and Design** project focuses on conceptualizing and visualizing the complete workflow of a smart educational application through a structured and intuitive user interface designed in **Figma**. The primary objective was to design a clean, user-centric UI that clearly demonstrates how users interact with the app and how its features are interconnected.

The application workflow illustrates how students can **capture an image using their device**, which serves as the input for an evolving model . From this image, the system generates a **contextual summary**, helping learners quickly understand the content. To enhance learning support, the app integrates **NEXI**, an AI chatbot that acts as a virtual teacher to clarify user doubts in real time. Additionally, **interactive labels** are incorporated to identify and explain different parts of the image, improving comprehension and usability.

A key contribution of this project is the emphasis on **educational accessibility, clarity, and guided learning** through thoughtful UI design. By mapping the entire user journey—from image capture to AI-driven assistance—the design enhances engagement, supports self-learning, and presents a seamless, intuitive campus-style digital learning experience.

Fig 3.2 UI Design of Nexus Campus

Interactive Features

A. Object Interaction System

A grab-and-place interaction system was implemented to allow users to interact with objects naturally within the VR Bicycle Simulation environment.

Fig 3.3 XR Interaction Toolkit Setup

B. Event-Driven Animation Triggers

Trigger-based systems were used in VR Chase Cricket to activate animations such as throwing and celebrations based on gameplay conditions, enhancing realism and user engagement.

3.4 VR Integration

All 3D assets, animations, and AI logic were assembled inside Unity.

Key steps:

- XR Rig setup for player view and controls.
- Animation controller design for triggering cricket moves.
- Performance optimization using occlusion culling and mesh compression.

CHAPTER – 4

RESULTS & DISCUSSION

4.1 Functional Outcomes

- VR Chase Cricket successfully delivered responsive fielding mechanics and smooth animation transitions.
- VR Bicycle Simulation provided immersive city navigation and intuitive object interactions
- NEXUS Campus provided an intuitive educational workflow with AI-assisted image analysis, interactive labeling, and real-time doubt clarification through the NEXI chatbot
- Event-driven animations enhanced gameplay realism.
- XR Interaction Toolkit enabled natural VR interactions.

Fig 4.1 Output

4.2 Performance and User Experience

- Both applications maintained stable performance in VR environments.
- Smooth animations and responsive interactions improved immersion.
- Users experienced intuitive controls and comfortable VR navigation.

4.3 Technical Contributions

The primary contributions made during the internship were:

1. Development of VR environments using Unity.
2. Implementation of animation blending and trigger-based systems.
3. Integration of XR Interaction Toolkit for VR interactions.
4. Design of interactive gameplay and simulation features.
5. Testing, optimization, and deployment of VR applications.

These contributions demonstrate applied expertise in Unity-based VR development, animation systems, and immersive interaction design.

CHAPTER – 5

CONCLUSION

The **VR Chase Cricket**, **VR Bicycle Simulation**, and **NEXUS Campus** successfully demonstrate the application of immersive technologies in developing interactive gaming, simulation, and educational experiences. VR Chase Cricket enables users to experience a realistic cricket environment by simulating dynamic fielding mechanics and player movements, while VR Bicycle Simulation allows users to engage with a virtual city environment through interactive cycling and object-based interactions. Complementing these VR-based projects, **NEXUS Campus** focuses on designing an intelligent educational application interface that visualizes the complete user workflow, integrating AI-assisted learning features such as image-based understanding, automated summaries, interactive labels, and the **NEXI chatbot**, which acts as a virtual teacher to clarify user doubts. Together, these projects showcase how immersive and interactive technologies can enhance realism, engagement, and learning beyond traditional applications.

A key aspect of these projects is the effective use of **Unity’s animation and interaction systems** and structured UI/UX design principles. In VR Chase Cricket, animation blending techniques using Animator Controllers and Blend Trees ensured smooth and natural player movements, while trigger-based systems synchronized gameplay events with animations such as throwing and celebrations. In VR Bicycle Simulation, the integration of Unity’s XR Interaction Toolkit enabled realistic user-object interactions, contributing to a hands-on and immersive simulation experience. In NEXUS Campus, **Figma-based UI design** was used to create a clear, intuitive, and user-centric workflow that enhances accessibility and learning clarity.

The projects also emphasize **user-centric interaction design** by focusing on responsiveness, usability, and comfort. By implementing intuitive controller-based interactions, well-structured environments, and clear interface layouts, all three applications provide smooth and engaging user experiences. Attention to interaction flow, animation synchronization, and interface clarity helped reduce user discomfort and improved overall immersion and usability.

Overall, the internship provided valuable practical exposure to immersive technology and application development workflows, including Unity scene design, animation blending, XR interaction implementation, UI/UX design using Figma, and application deployment. The **VR Chase Cricket**, **VR Bicycle Simulation**, and **NEXUS Campus** projects serve as strong proof-of-concept applications for immersive gaming, simulation, and AI-assisted learning, highlighting the potential of emerging technologies in interactive entertainment and experiential education domain

08 September 2025

Dear Sneha,

Re: Offer of Internship - **UI/UX Developer - XR & Web (Intern)**

We are pleased to offer you the position of **UI/UX Developer - XR & Web (Intern)** at Immersive Nexus Ltd., UK as part of our **NexStep** initiative. This opportunity has been coordinated in collaboration with the Computer Science and Design Department of Rajalakshmi Engineering College to provide you with meaningful industry exposure and hands-on experience in cutting-edge immersive technologies.

Internship Details:

- **Role:** UI/UX Developer - XR & Web (Intern) (plus std benefits of flexible and remote working).
- **Start date:** 10th September 2025.
- **End date:** 24th October 2025.
- You will be employed on a **Part-Time basis**, working flexibly five days a week, Monday to Saturday, between **9:00 am and 5:00 pm BST**.
- **Work mode:** Online (No offline commitment is expected).
- **Workplace:** Remote (working from home).
- **Reporting to:** Niveditha Kumaran, Chief Executive Officer.

On successful completion of the internship:

- You will receive a certificate of completion
- A comprehensive performance report to your institution to facilitate credit transfer

If you wish to accept this offer of employment, please sign and date below, returning a copy by 10th September 2025, to info@immersivenexus.co.uk.

We look forward to welcoming you to Immersive Nexus and supporting your journey towards a long-standing career in future tech.

Thanks and best wishes,

K. Niveditha

Niveditha Kumaran
CEO & Co-Founder
Immersive Nexus Ltd.

Job Description:

UI/UX Developer - XR & Web (Intern)

Reference Number:	NXT004
Department/Business Unit:	Research and Development
Position Type:	Internship (6-week placement, part-time)
Work Schedule:	9 am - 5 pm BST, flexible, 20 hours/week
Location:	Online, Remote
Reports to:	Chief Executive Officer (CEO), Immersive Nexus Ltd
Reviewed on:	8 September 2025

About Immersive Nexus Ltd

Immersive Nexus Ltd is a future-tech company at the intersection of extended reality (XR), artificial intelligence (AI), and immersive applications. As we scale our product development and market reach, we are implementing a strategic growth and innovation programme to expand our impact and strengthen our competitive position.

We value innovation, integrity, inclusion, and initiative. We are a supportive, mission-driven team working at the edge of immersive tech.

About NexStep by Immersive Nexus Ltd

NexStep by Immersive Nexus is a career building initiative designed to equip university students and recent graduates with real-world experience in emerging technologies like XR and AI. Interns take on active roles across departments, contributing directly to live projects while developing valuable industry skills. The programme includes personalised mentorship, regular feedback, and portfolio-building opportunities, making it an ideal stepping stone for those looking to kickstart a career in future tech.

Role Overview

As a UI/UX Developer, you will support the design and development of engaging user experiences for our XR applications, websites, and social media channels. You'll play a key role in creating digital interfaces that are not only functional but also visually compelling, helping us communicate innovation to users and clients.

Key Responsibilities and Duties

- Design and implement user interfaces for AR, VR, and XR applications using Unity/Unreal.
- Develop and optimise website UI with responsive design (HTML, CSS, JavaScript, React, or similar).
- Create engaging assets for websites and social media platforms (banners, graphics, interactive visuals).

- Translate wireframes and prototypes into interactive, user-friendly experiences.
- Collaborate with designers, developers, and marketing teams to maintain consistent branding and usability.
- Test, debug, and refine interfaces to ensure seamless user interaction.
- Stay up to date with design and development trends in XR and web technologies.

Desired Skills & Experience

- Strong knowledge of UI/UX principles.
- Basic proficiency in front-end technologies (HTML, CSS, JavaScript).
- Familiarity with XR platforms and engines (Unity or Unreal).
- Creativity with attention to detail in visual design.
- Ability to create digital assets using design tools (Figma, Photoshop, Illustrator, or similar).
- Strong communication and collaboration skills.

Eligibility

- Open to undergraduate students in Computer Science, Engineering, Game Development, Game Design, or related fields
- Must be able to commit to the full internship period
- Access to a laptop/PC capable of running XR development environments is preferred

Benefits

- First-hand experience contributing to early-stage innovation projects
- Practical exposure to startup operations and immersive product cycles
- Personalised mentorship from founders and networking opportunities
- Flexible and remote work environment
- A letter of recommendation and certificate upon successful completion
- Potential for extended internships or placements based on performance and business needs
- Exposure to a dynamic and fast-growing company with exciting career prospects.

Acknowledgement and Acceptance

I, Sneha Sridhar, accept the offer for the UI/UX Developer - XR & Web (Intern) position at Immersive Nexus Ltd. I understand this is a temporary internship and agree to fulfil the responsibilities outlined above.

Dear Sneha,

Greetings from the Nexus team!

We are delighted to offer you the position of **UI/UX Developer - XR & Web (Intern)**, in collaboration with your department, under our **NexStep** initiative. Please find your official offer letter attached to this email.

This opportunity will provide you with valuable, hands-on experience working on live projects in the areas of XR, AI, and emerging technologies, alongside our dynamic and passionate team.

Please reply to this email with the completed and signed copy of the attached offer letter no later than **10th September 2025**. If you have any questions or require further clarification, feel free to reach out.

We are excited to welcome you aboard and look forward to the contributions you will bring to our projects.

Thanks and Regards,
Niveditha

Dear Team,

Please find attached the logbook/progress tracker.

This will be a tracker for your individual progress. Please enter your details and update the Expected Deliverables section with this week's task. Also, make sure to update it with your progress throughout the week, sign it, and return it as a .docx file by Friday each week. Moving forward, you are expected to update the progress and submit it at the end of each week.

Keep up the good work!

Thanks and Regards,
Niveditha

Dear Sneha,

Hope you are doing well.

To proceed with the onboarding process, kindly send the following documents at your earliest convenience:

1. A copy of your valid student ID or university enrolment letter
2. A scanned copy of a valid photo ID (passport or government-issued ID)
3. Your updated CV (if there are any recent changes)

Also, please sign and return the attached GDPR consent form along with the other documents.

All the best! Looking forward to working with you!

Dear Sneha,

I hope you're doing well.

As you conclude your NexStep internship with **Immersive Nexus**, I would like to extend our heartfelt thanks for your dedication and commitment over the past eight weeks. Your efforts and contributions have been immensely valuable in supporting the vision and innovation we strive for at our company.

We trust that the mentorship and experiences you gained during this career-building programme have been enriching and rewarding for you as well.

To officially complete your internship, we kindly request that you submit the following deliverables by **Sunday, 2nd November 2025**:

- **Project Files & Assets:** All completed and organised files from your work. Please upload them to Google Drive and share the folder link with us by replying to this email or sending it to info@immersivenexus.co.uk. Figma files to be moved to the company login.
- **Project Logbook:** Updated and signed logbook with the final week's progress and deliverables.
- **Project Summary:** A concise write-up outlining your project goals, technologies used, challenges faced, and key learnings.
- **Portfolio Snippet (Optional):** Any visuals or demo elements you'd like to include, either for internal records or for showcasing in your portfolio.

Additionally, we ask that you delete any sensitive or confidential data related to Immersive Nexus, its products, or services from your personal devices.

Once we receive your submissions, we will issue your **Internship Completion Certificate** and a formal **Confirmation Letter** to your university department. If needed, we would also be happy to provide a **professional reference** to support your future applications.

As a NexStep alumnus, we are pleased to share your portfolio with our partners for upcoming projects. Please share your personal email address with us so we can reach out to you about this once you are shortlisted.

It has been a pleasure having you on board. Your contributions have certainly made an impact on our future tech journey. If you need any support with the handover process, please don't hesitate to reach out.

On behalf of the **Nexus Family**, we wish you the very best in your education, career, and all your future endeavours.

Thanks and Regards,
Niveditha

Dear Dr Umamaheswararao,

I hope this message finds you well.

I'm writing to formally inform you that **Sneha Sridhar (221701055)**, a student from your department, has successfully completed her internship as **UI/UX Developer - XR & Web (Intern)** at **Immersive Nexus Ltd** under our **NexStep Internship Programme**.

Please find attached Sneha's internship completion report for your reference and her completion certificate. We hope these documents help facilitate her credit transfer and support her educational and professional pursuits in the future.

Please feel free to reach out if you'd like any additional documentation or feedback from our side.

Thanks and Regards,
Niveditha

Niveditha Kumaran

NEXSTEP INTERNSHIP COMPLETION REPORT

Intern ID	INTMP25008
Role	UI/UX Developer - XR & Web (Intern)
Project	Chase VR Cricket, Bicycle Simulation, Nexus Campus
Student Number	221701055
Student Name	Sneha Sridhar
Department	Computer Science and Design Department
Institution	Rajalakshmi Engineering College, Chennai, India.
Project Duration	6 weeks
Start Date	10 th September 2025
End Date	31 st October 2025.

Introduction

This report summarises the internship of **Sneha Sridhar**, a student from the **Computer Science and Design department** at **Rajalakshmi Engineering College**, who completed her internship with **Immersive Nexus Ltd** as part of the **NexStep internship programme**. The internship took place from **10th September 2025** to **31st October 2025** and was conducted under the supervision of **Dr Lionel Jayaraj**, Founder & CITO of Immersive Nexus Ltd. Her reporting manager during this period was **Niveditha Kumaran**, Co-Founder & CEO of Immersive Nexus Ltd.

About the Company

Immersive Nexus Ltd is a UK-based future technology company specialising in Extended Reality (XR) and Artificial Intelligence (AI) application development. With a focus on cutting-edge solutions like full-body motion capture, generative AI, and immersive technology. Immersive Nexus blends technical expertise with creative vision. The company's mission is to push the boundaries of technology to create transformative, interactive, and impactful digital experiences.

About the Supervisors

Dr Lionel Jayaraj, PhD, MRes (Virtual Reality Games), FHEA, PGCHPE currently serves as the Founder and Chief Innovation & Technology Officer at Immersive Nexus Ltd and is an Academic in Games Development at the University of Bedfordshire, UK. Dr Jayaraj's academic expertise lies at the intersection of engineering, game art, game design, and immersive media. He earned both his PhD and MRes in Virtual Reality Games from the University of Bedfordshire, focusing on enhancing immersion in virtual environments.

Niveditha Kumaran currently serves as the Co-Founder and Chief Executive Officer of Immersive Nexus Ltd. She brings extensive professional experience across information systems, digital learning platforms, business strategy and emerging technologies. She holds a Bachelors in Electronics and Communication Engineering and a PGCert in AI Leadership from the University of Texas at Austin, with a strong focus on translating advanced technologies into practical, industry-ready solutions.

Internship Overview

The intern joined our team as an **UI/UX Developer - XR & Web (Intern)**, contributing to research, development, and prototyping within our XR and AI projects. She contributed to the following projects:

- **Chase VR Cricket**

- Bicycle Simulation
- Nexus Campus

WEEK 0&1: [19.09.2025]

Expected deliverables

- I designed a graybox user interface for a bicycle game and a cricket game using Figma. The project involves creating intuitive layouts, visual elements, and interactive screens to demonstrate gameplay flow. I also have done a presentation to showcase the design process, key features, and user experience enhancements.
- I implemented the bicycle game UI in the Unity environment using the XR Toolkit and Device Simulator. This setup allows for immersive testing and interaction, enabling me to simulate real-world device behaviors, refine UI elements, and ensure a smooth and responsive user experience across different XR devices.

Summary of progress and achievements

- Successfully implemented card-to-card transitions in the interface, enabling smooth navigation between screens.
- Developed and tested button functionalities to ensure all mechanisms work correctly.
- Ensured interactive elements respond as intended, enhancing overall user experience.
- Improved the application's interactivity and usability through functional UI elements.

Identified issues

- Some button interactions were initially unresponsive and required debugging.
- Transition animations between cards occasionally experienced delays or stutters.
- UI elements needed adjustments to ensure consistency across different screen sizes and resolutions.
- Minor alignment and spacing issues affected the overall visual layout.
- Certain features required optimization for smoother performance in the device simulator.

Action plan

- Debug and fix any unresponsive button interactions.
- Optimize card-to-card transition animations for smoother performance.
- Adjust UI elements for consistency across different screen sizes and resolutions.

- Correct alignment and spacing issues to improve visual layout.
- Test and refine features in the device simulator to ensure seamless functionality.

Supervisor's comments

- Good presentation. The presentation kept everything informed, crisp and was clear.
- The VR UI and UX research are effectively made.
- Good collaboration with the Bicycle VR project team and has shown demonstration during a client evisit.
- Good communication and documenting skills.

Supervisor's signature

Student's signature

WEEK 2: [26.09.2025]

Expected deliverables

- I am currently implementing the cricket game UI in the Unity environment with enhanced graphical elements to create a visually engaging and realistic experience. Using the **XR Toolkit** and **Device Simulator**, I am integrating interactive menus, scoreboards, and player interfaces to ensure seamless gameplay interaction. This setup allows for immersive testing across multiple XR devices, helping me refine visual components, improve responsiveness, and deliver an intuitive, high-quality user experience that complements the game's dynamic nature.

Summary of progress and achievements

- I am currently working on achieving a **curved UI layout** for the cricket game interface to enhance visual depth and create a more immersive player experience. This involves refining the screen design to wrap around the user's field of view, providing a realistic and intuitive interaction environment. By integrating **curved canvases** and **3D UI elements** within Unity using the **XR Toolkit**, I aim to deliver a visually

appealing and user-centric interface that maintains smooth functionality across devices.

- The UI implementation for the cricket game is more complex compared to previous projects, and I am currently **working towards achieving optimal functionality and visual refinement**. My focus is on ensuring smooth interaction, consistent responsiveness, and maintaining design integrity across all game screens.

Identified issues

- Encountered version compatibility issues with the current Unity Engine, making it difficult to download and integrate the Meta XR package.
- Unable to achieve the curved canvas due to technical limitations in the existing Unity setup.
- Currently exploring alternative approaches and version management strategies to implement the desired curved UI layout effectively.

Action plan

- Exploring solutions to implement a curved UI within the cricket game interface.
- Researching alternative methods and Unity version compatibilities to enable curved canvases with Meta XR integration.
- Experimenting with 3D UI layouts and world-space canvases to replicate the visual depth and immersive experience intended for the final design.

Supervisor's comments

- Impressed with the UI designs and demonstrations with Figma.
- Analysed, the Cricket game UI designs well and suggested various UI implementations for the next CICD release.
- Good in attempting trying the Curved UI following the tutorials.
- Effective Teamwork and communication.

Supervisor's signature

Student's signature

Expected deliverables

- I currently have to complete the **Cricket Game UI** in the Unity environment with enhanced graphical elements to deliver a visually captivating and realistic gameplay experience. Using the **XR Toolkit** and **Device Simulator**, I am refining interactive menus, scoreboards, and player interfaces to ensure fluid and responsive user interaction. This setup facilitates immersive testing across multiple XR devices, helping me fine-tune visual components, optimize performance, and enhance the overall gameplay experience to align with the dynamic and engaging nature of the sport.
- I will be conducting research for my **next project**, which focuses on developing an application capable of **scanning images from books and transforming them into animated versions of the scanned pictures**. This involves exploring suitable computer vision and animation frameworks, understanding image-to-motion conversion techniques, and identifying tools or AI models that can automate and enhance the transformation process to create interactive, visually appealing educational or storytelling experiences.

Summary of progress and achievements

- Implementing curved ui in the Unity engine
- Researching an augmented reality app that involves scanning images from books and transforming them into animated versions of the scanned pictures.

Identified issues

- Uncertainty around best practices for arranging UI elements in a 3D/curved interface.
- Difficulty in achieving consistent scaling and readability across different XR devices.
- Challenges in integrating interactive menus and scoreboards without affecting performance.
- Confusion regarding world-space vs. screen-space canvases for immersive interaction.

Action plan

- Perform a presentation on augmented reality app on Friday
- Create a graybox ui for the augmented app
- I have to complete the Cricket UI implementation.

Supervisor's comments

- Good delivery of the demonstration of UI mechanics in VR for the Chase VR Cricket Game.
- Please go ahead complete the UI implementation and submit the files.
- Well done in participating in discussion and brainstorming during the status call and the KT session.
- Well done in capturing the requirements for the AR projects and the initial works are commendable.

Supervisor's signature

Student's signature

WEEK 4: [10.10.25]

Expected deliverables

- What I expect to do this week is to create new graphical elements for the existing UI in the Cricket Game using Unity. I will work on enhancing the menus, scoreboards, and player interfaces to make them more interactive and visually engaging. I will also refine these elements using the XR Toolkit and Device Simulator to ensure smooth performance across multiple XR devices. Finish implementing the curved ui in the Unity environment
- I will also begin the initial research phase for my next project. an application that scans images from books and transforms them into 3D visualizations of the image. I also wanted to do the gray box version of this app and present it
- I was also assigned the task of designing **Cricket Game flyers using Canva** to visually represent and promote the project. This involved creating appealing layouts, selecting suitable color schemes and typography that align with the game's theme, and highlighting key features to attract attention. The goal was to design a flyer that effectively communicates the excitement and visual style of the cricket game while maintaining a professional and engaging presentation.

Summary of progress and achievements

- This week, I successfully implemented the **curved UI** in the Unity Engine, enhancing the visual appeal and user experience of the Cricket Game.
- I also created the **gray box version** of the Augmented Reality (AR) application, setting up the basic structure for future development.
- I designed **flyers for the Cricket Game** to visually represent the project's concept and promote its key features.

Identified issues

- While implementing the **curved UI**, I encountered an issue where **two UI panels were displayed simultaneously** in the game view, which was not intended and affected the interface layout.
- There are also features needed to be added in the gray box version of the augmented reality app .

Action plan

- To resolve the issue of two UI panels appearing simultaneously, I will review the UI hierarchy and canvas settings in Unity to ensure only the intended curved UI is active during gameplay. I plan to adjust the rendering order and verify that no duplicate canvases or overlapping UI elements exist.
- Additionally, for the gray box version of the augmented reality app, I will identify and implement the missing features, refine the layout, and enhance interactivity to align with the intended functionality and user experience goals.

Supervisor's comments

- Good flexibility in task shifting.
- Good collaboration was displayed in delivering the flyers.
- Continuous communication for effective delivery of the designs.
- Good creativity and critical thinking was displayed during initial design of the AR application.

K.Niveditha

Supervisor's signature

Student's signature

WEEK 5: [24.10.25]

Expected deliverables

- This week, I collaborated with Amritha A on the project presentation to effectively communicate our progress and future plans. We discussed and brainstormed various new features that can be integrated into the Augmented Reality (AR) app to enhance user interaction and overall engagement.

Summary of progress and achievements

- I delivered the project presentation in collaboration with Amritha and received positive remarks for our work. Based on the feedback provided, I will be making necessary changes to the Figma design in the upcoming week to further improve the user interface and overall presentation quality.

Identified issues

- While working on the augmented reality app, we spent a considerable amount of time deciding which features should be included and evaluating whether the chosen tech stack would be suitable for implementing those features effectively. There are still several functionalities left to be added to the gray box version of the AR application to move forward with a more complete prototype.

Action plan

- To progress efficiently with the augmented reality app, we will first finalize the list of core features to be included in the functional prototype. And will be modified in the Figma design file.

Supervisor's comments

- Good team work and knowledge transfer displayed
- Good research and presentation skills
- Good understanding of expected features and additional feature to enhance the application
- The design based on the user end perspective is appreciated

K. Niveditha

Supervisor's signature

[Signature]

Student's signature

WEEK 6: [31.10.25]

Expected deliverables

- Move all the Figma files to the company login
- Once moved, work with Amritha on adding the features from your research onto the Figma design
- Submit a one-page internship report. A concise write-up outlining your project goals, technologies used, challenges faced, and key learnings.

Summary of progress and achievements

- I moved the project files into the company login,
- I made the required changes to the Figma design to enhance the user interface
- I submitted the internship report for review.

Identified issues

- While working on the augmented reality app, I encountered issues in assigning consistent styles to the elements in the Figma design and determining how to effectively execute the planned features within the chosen tech stack. These challenges need to be addressed before adding the remaining functionalities to the gray box version of the AR application to progress toward a more complete prototype.

Action plan

- To progress efficiently with the augmented reality app, I will be discussing with Amritha to finalize and add the appropriate styles in the Figma design, as well as ensure that the planned features are implemented properly in the functional prototype.

Supervisor's comments

- Handover was done in a smooth and efficient manner
- Knowledge transfer to the team mate was good
- Proactive discussions initiated with team mate for further improvement of the application is appreciated

INTERNSHIP SUMMARY

From Student:

Hello!

I'm Sneha Sridhar, and I recently had the incredible opportunity to work at Immersive Nexus, a UK-based startup, as a UI/UX Developer—XR & Web (Intern). I began my internship on September 10th, 2025, and when I first heard about my role, I initially assumed I'd be focusing primarily on creating UI wireframes for upcoming projects. However, as a UI/UX Developer, I was given the creative freedom to introduce and design new features that enhanced the projects' user interfaces. This experience allowed me to dive deep into the UI domain, especially within frameworks like Unity, where I explored new dimensions of immersive design. It has truly been an exciting and eye-opening journey, blending creativity, technology, and innovation in ways I hadn't imagined before.

As a UI/UX Developer – XR & Web (Intern), I was tasked with designing graybox UI layouts for a Cricket game and a Bicycle game using Figma. While creating these designs, I incorporated my own imagination to visualize how the final games would look and feel, ensuring the interfaces captured the essence of gameplay. Beyond just designing in Figma, I also implemented the UI in Unity Engine, bringing my concepts to life within the development environment. As someone who hadn't explored the UI development aspect of XR before, this project was an incredible opportunity to dive deeper into immersive design and experiment with different ways to make the UI both engaging and visually appealing within the game.

I also had the opportunity to observe how a product is proposed to stakeholders during the Bicycle Game presentation, gaining first-hand insight into their expectations, feedback, and perspectives throughout the process. Additionally, I designed promotional flyers for a Cricket Game event organized by Mr. Lionel Jayaraj and Mrs. Niveditha Kumaran, collaborating closely with Mrs. Niveditha on the design. This experience gave me a deeper understanding of how the Agile process operates within a design workflow—teaching me how to adapt creative ideas based on client feedback, maintain effective collaboration, and align design outcomes accordingly.

This internship not only helped me enhance my technical skills but also gave me the opportunity to develop my soft skills. As someone who initially found it challenging to present ideas in front of a group, I truly appreciated how my team encouraged and supported me throughout the journey. Their appreciation for my creativity and their openness to hearing my ideas boosted my confidence tremendously. Whenever I encountered challenges, the team was always ready to help and guide me, pushing me to give my best effort until I achieved my goals. This experience greatly boosted my self-esteem, helping me realize that with consistent effort and the right mindset, I am fully capable of overcoming challenges and accomplishing any task I set my mind to.

As someone who loves playing games, I've always been fascinated by how game and XR developers create such visually stunning user interfaces on a simple flat screen within the Unity Engine framework. From my very first task at Immersive Nexus— implementing creative elements in UI—to now, I've learned how to control parts of a model through UI components and even achieve curved UIs by integrating the right modules. This journey has taught me innovative ways to design and implement UI elements, and I continue to explore new, creative techniques to craft engaging interfaces across any framework I work with.

In conclusion, this internship has provided me with valuable insights into UI/UX design and has strengthened my creativity in crafting user interfaces that are intuitive and user-friendly. I also gained hands-on experience with the appropriate tech stacks required to achieve the desired UI framework for different applications. I am truly honored to have been a part of the Immersive Nexus community. This experience has empowered me to confidently identify myself as a UI/UX developer capable of working across diverse frameworks.

From Supervisor:

Sneha demonstrated strong commitment and was consistently available to provide timely support when required. She showed good proficiency in graphic design and conducted effective UI research, including exploring novel UI elements for an existing VR application as well as researching UI workflows and capabilities in Unity 6. Her research contributions added clear value through thoughtful, relevant, and creative insights.

From Manager:

Sneha showed excellent flexibility by adapting to changing tasks and delivering accordingly. She had a clear understanding of expectations and requirements. Notably, she displayed impressive creativity while conceptualising an AR prototype. She contributed effectively both independently and as part of a team. Additionally, she ensured a smooth handover of her responsibilities to a teammate by providing all necessary information and files, reflecting good professionalism and teamwork.

Conclusion:

Immersive Nexus Ltd is pleased with the contribution of Sneha during the internship period. We believe the skills and experiences gained will serve her well in her future academic and professional endeavours. We appreciate the opportunity to collaborate with Rajalakshmi Engineering College in nurturing talent and look forward to further partnerships.

Respected Sir,

Sub: Requesting for Foreign Internship(Online) Credit Transfer - Regarding

This is to inform you that our students have successfully completed their internship at **Immersive Nexus, London**, a reputed foreign firm for a period of **6 Weeks**, specializing in Virtual Reality, Augmented Reality, and Artificial Intelligence. During the course of their internship, the students worked on three major projects: **Coach Butcher XRI, VR Cricket & VR Bicycle Simulation**, and **AR Nexus Campus**.

1. **Coach Butcher XRI** – An advanced XR-based cricket training module developed in collaboration with **Roland Butcher**, former England cricketer.
2. **VR Chase Cricket & VR Bicycle Simulation** – High-fidelity simulation projects focusing on realistic sports and fitness experiences using VR technology.
3. **AR Nexus Campus** – An interactive AR-based campus navigation and information system enhancing user engagement through augmented visualization application.

Below is the list of students along with the respective project titles they worked on

S.No.	Project Title	Students
1	Coach Butcher XRI	Adhithya P.G (221701005), D. K. Charan Raj (221701011)
2	VR Cricket Simulation & VR Bicycle Simulation	Avula Sneha Driti (221701008), Lingesh V.K (221701032), Mohan Vaithya E (221701037), Sneha S (221701055), Lokeshwar S.R (2217010504), Santhosh K (221701505)
3	AR Nexus Campus	Abhignya P (221701002), Amritha A (221701007)

Seeking your approval for their Credit Transfer, the review is scheduled to be conducted on 17th December 2025. Kindly do the needful.

Thanking You
